01

The Crisis & The Cure

Air-Cooled Mining Is Bleeding Margin

01

Capacity Utilization

Legacy air-cooled mining operations struggle with only 67-70% capacity utilization, leading to significant revenue loss.

Retrofitting with TerraHash Stack can transform this underperformance into high-efficiency operations.

02

Seasonal Revenue Loss

In hot climates, traditional mining faces 15-20% seasonal revenue loss due to poor thermal management.

TerraHash Stack's advanced cooling technology eliminates this issue, ensuring consistent performance year-round.

03

Downtime Costs

Unplanned downtime costs \$50,000-\$200,000 per megawatt per incident. TerraHash Stack's 99%+ uptime guarantee mitigates these costly interruptions, safeguarding your mining operation's profitability.

04

ASIC Lifespan

Constant thermal stress shortens ASIC lifespan from 50+ months to just 30-36 months. TerraHash Stack extends equipment life by 40%, reducing costly hardware replacements.

AI TerraHash Stack in One Glance

Integrated Retrofit Solution

The TerraHash Stack is a comprehensive retrofit solution that transforms legacy mining infrastructure into a high-efficiency, AI-powered profit center with industry-leading performance improvements.

Core Technology Pillars

It integrates four core technologies: Chilldyne liquid cooling, BrainsOS+ firmware, AI-powered operations, and automated treasury management, delivering rapid ROI and guaranteed uptime.

Childdyne Cooling: Hash More, Leak Never

01

Negative-Pressure Liquid Cooling

Childdyne's patented negative-pressure liquid cooling eliminates catastrophic coolant leak risks, ensuring safe and reliable operation. This technology enables 20% hashrate increases through safe overclocking.

02

Thermal Management

Superior thermal management drops chip temperatures by 30°C, extending ASIC lifespan by 40%. This thermal headroom translates into measurable hashrate and replacement-cycle savings.

03

Energy Efficiency

By maintaining optimal temperatures, Childdyne cooling significantly reduces energy consumption per terahash, contributing to overall operational cost savings.

BrainsOS+ Unlocks Hidden Efficiency

Per-Chip Autotuning

BrainsOS+ delivers 8-15% improvement in J/TH efficiency through per-chip autotuning, unlocking the full potential of your hardware without vendor lock-in. This open-source firmware provides transparent performance metrics.

AI Ops & Treasury: Profit on Autopilot

01

Autonomous Operations

AI-powered autonomous operations handle 95% of operational decisions, from real-time optimization to predictive maintenance, reducing manual interventions and maintenance costs by 60%.

02

Predictive Maintenance

Predictive maintenance ensures 99%+ uptime, mitigating costly downtime risks. This proactive approach keeps your mining operation running smoothly and efficiently.

03

Automated Treasury Management

The non-custodial treasury management system strategically allocates assets between Bitcoin and stablecoins, boosting long-term profitability by 30-60% without adding risk.

03

Hard Numbers

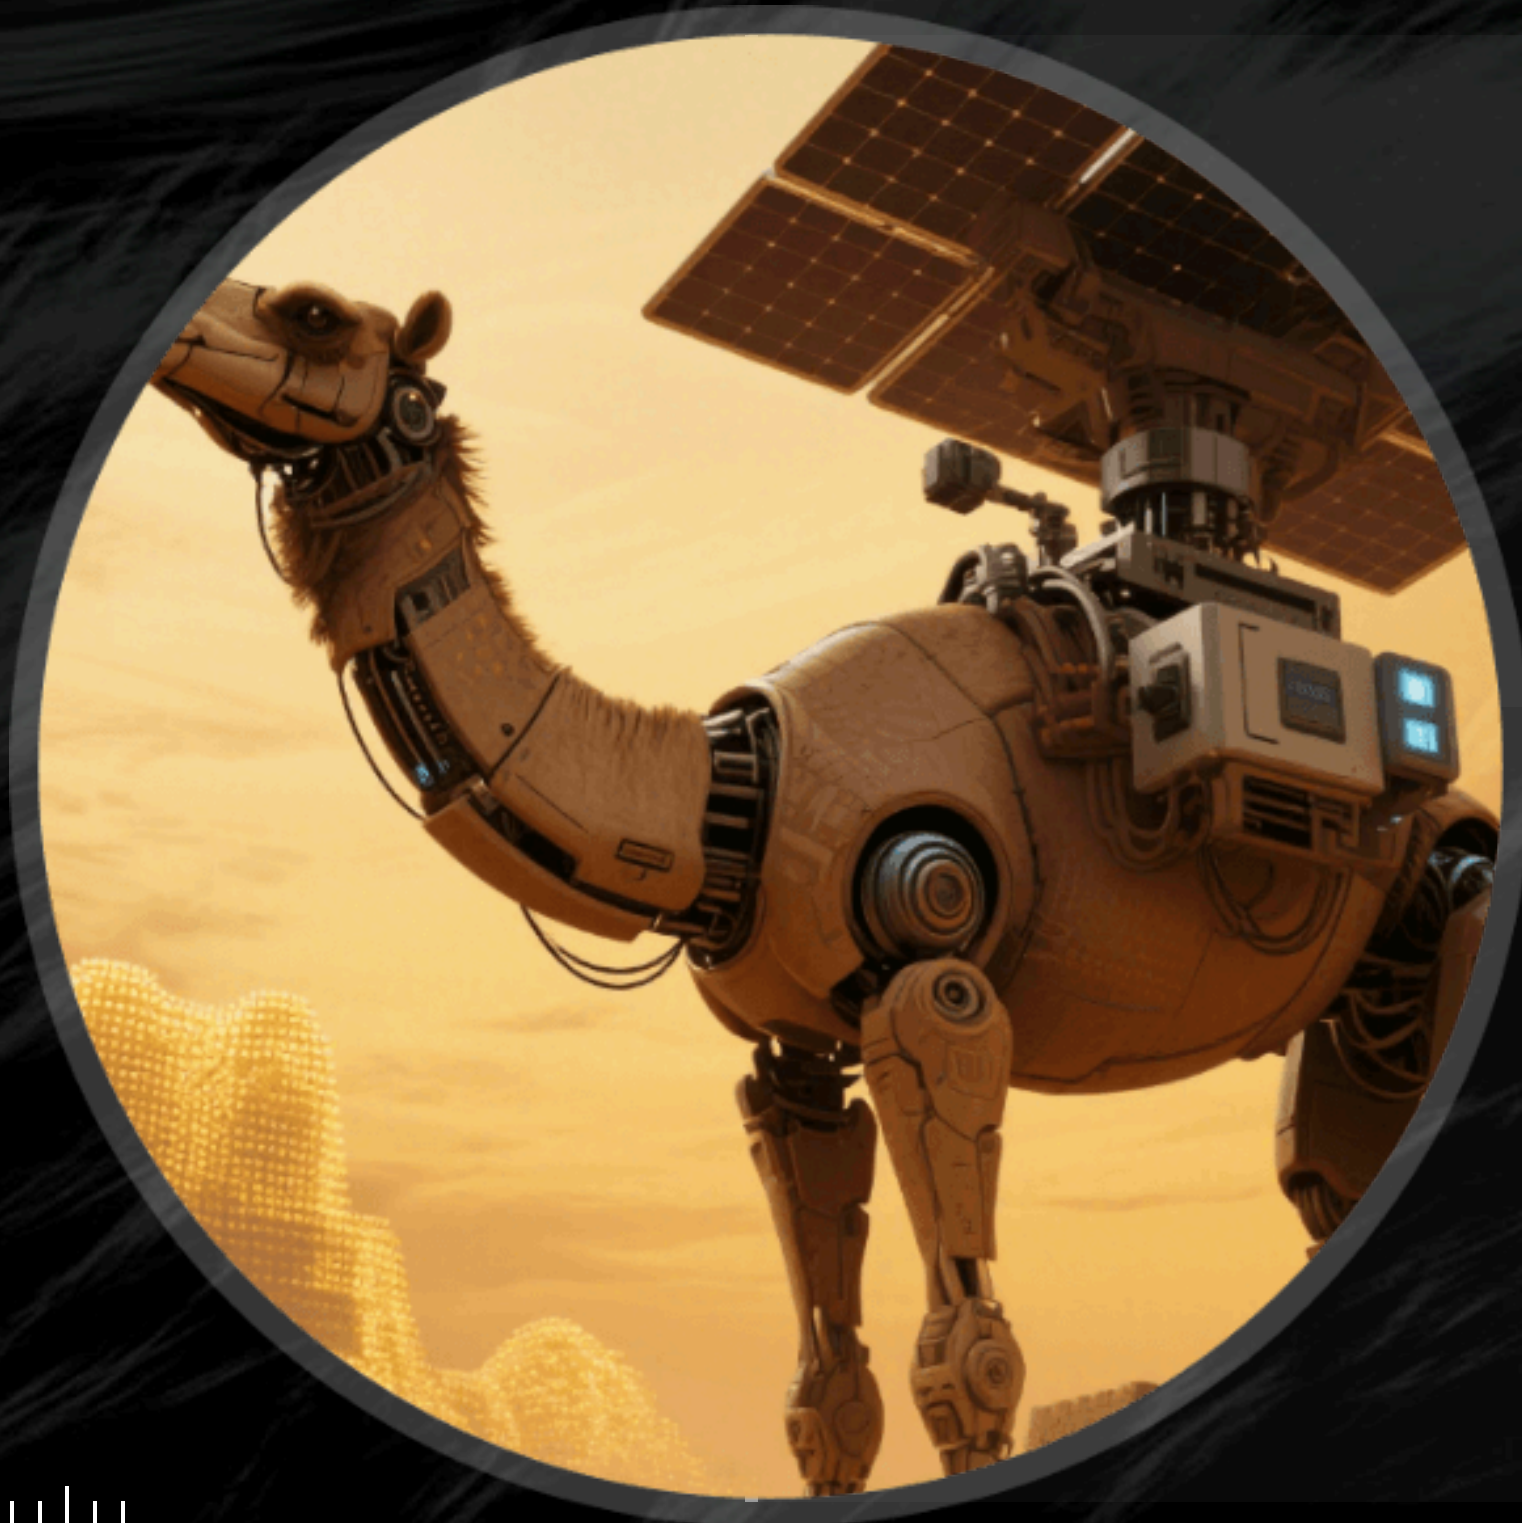

Before vs After: The 23 % Energy Win

Energy Efficiency Gains

The TerraHash Stack reduces energy consumption from 18.5 J/TH to 14.2 J/TH, a 23% improvement. This translates to significant cost savings and enhanced profitability.

Hashrate and OPEX Reduction

It also delivers a 20% hashrate boost and a 65% reduction in operational expenses. These improvements ensure a rapid payback period of 16-24 months.

Payback & Uptime You Can Bank On

Rapid Payback

With a typical payback period of 16-24 months, the TerraHash Stack offers a quick return on investment, making it a financially sound decision for your mining operation.

Performance Guarantees

Fixed-price contracts with performance guarantees and comprehensive SLA support ensure your success, transferring risk from your operation to Ryno Crypto.

01

Guaranteed Uptime

TerraHash Stack guarantees 99% uptime, significantly higher than the industry average of 85-90%. This reliability ensures consistent mining operations and revenue generation.

02

03

Extended Equipment Life

The retrofit extends ASIC lifespan from 30-36 months to 4-5 years, reducing hardware replacement costs and maximizing the value of your investment.

04

04

Deployment Choices

Container, Warehouse, or Fleet-Only

01

Container-Based Retrofits

Ideal for modular deployments, 5 MW container retrofits offer a 16-20 month payback period within a 12-14 week timeline, requiring an investment of \$1.8-2.2M.

Warehouse Conversions

Comprehensive overhauls for large-scale facilities (25 MW typical) provide an 18-24 month payback period within a 20-24 week timeline, with an investment of \$9-11M.

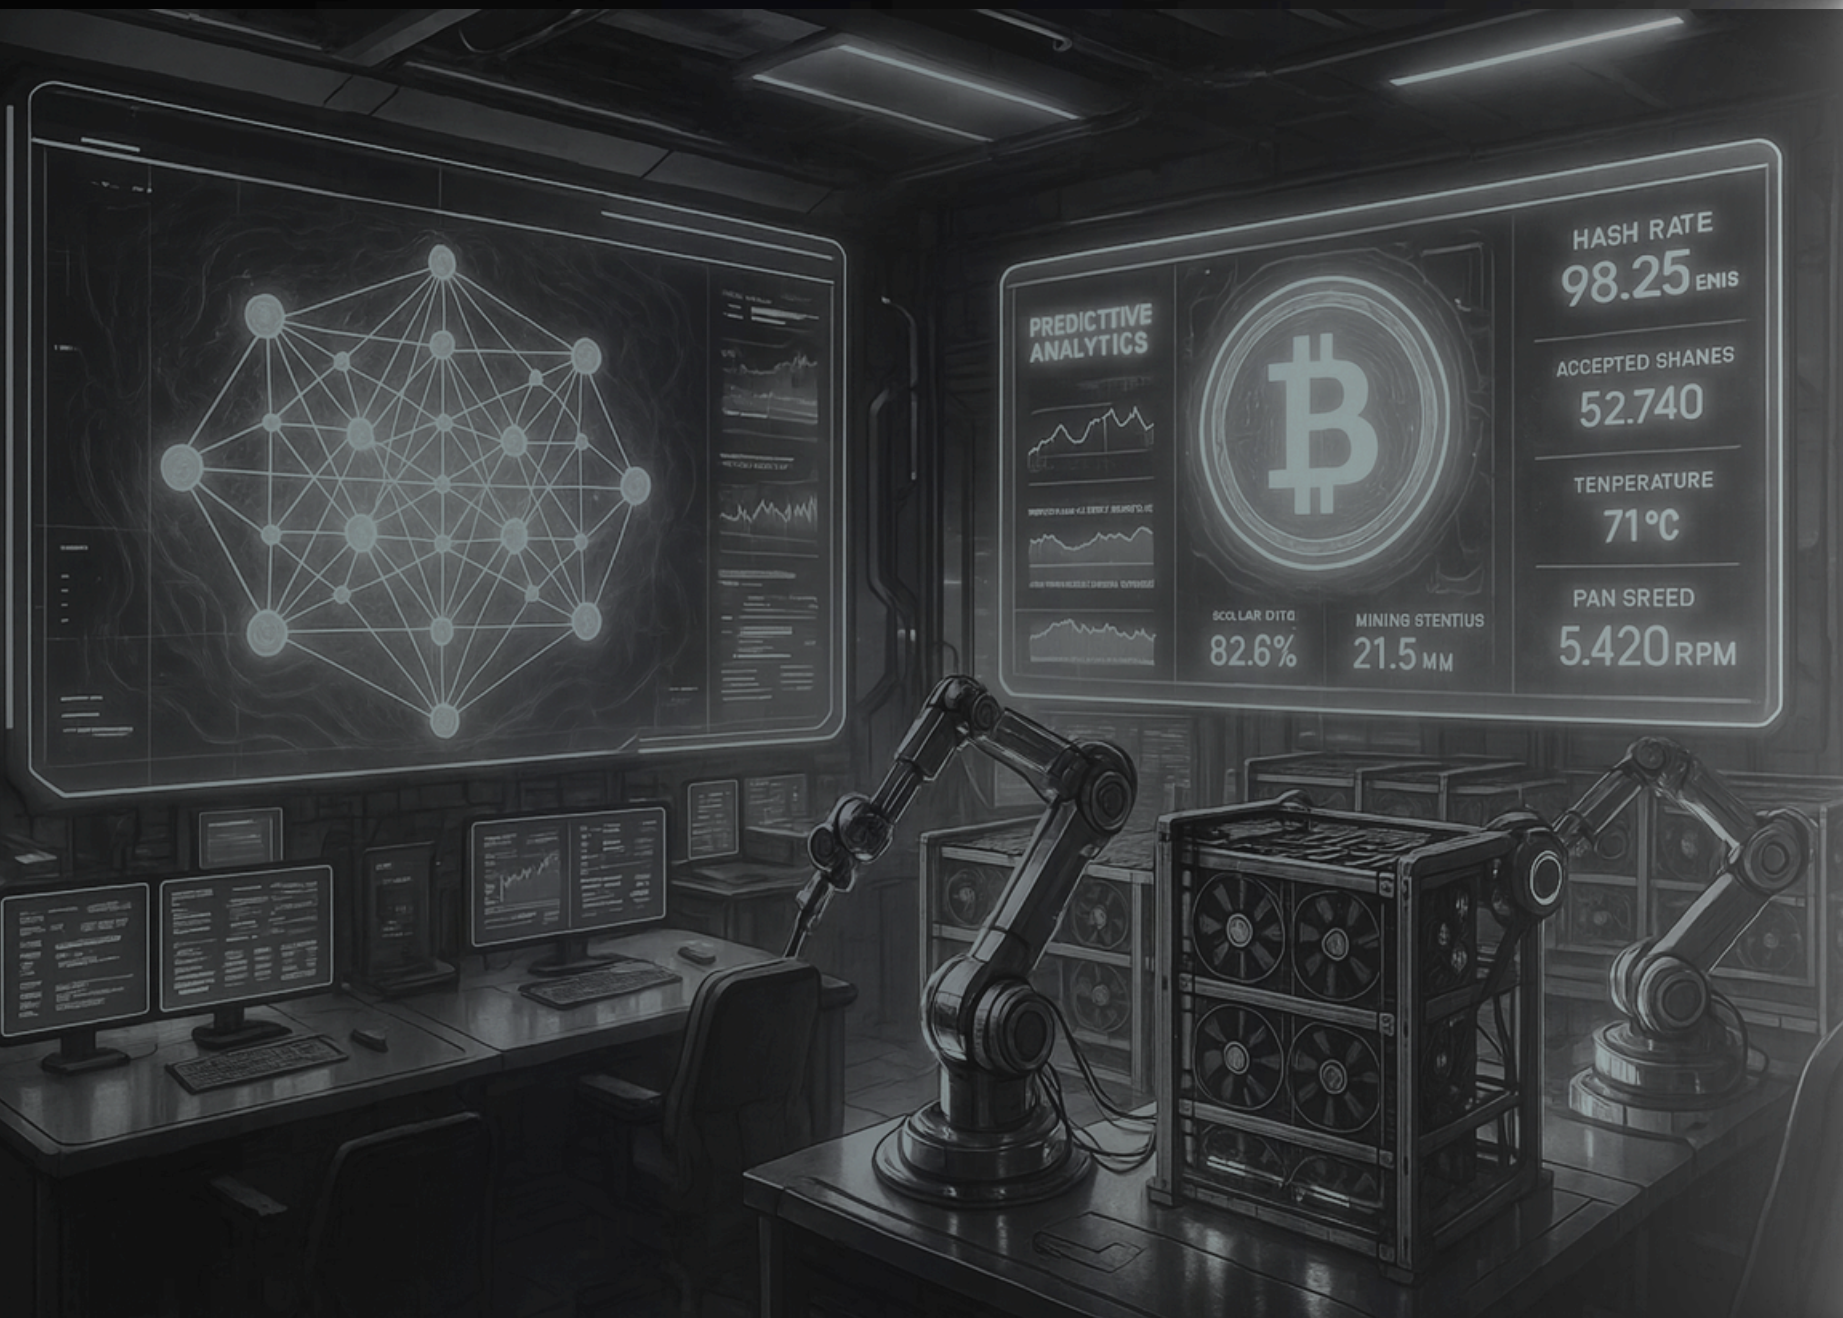

02

03

Legacy Fleet Upgrades

Targeted solutions address specific operational bottlenecks with custom timelines and pricing, ensuring flexibility and tailored improvements.

7-Day Assessment to Signed Deal

Rapid Assessment and Deployment

Ryno Crypto offers a rapid 7-10 day facility assessment, followed by a custom engineering design, modular phased construction, and 24/7 NOC optimization. This streamlined process ensures quick deployment and value realization.

Why Ryno Crypto, Why Now

Open-Source and Sustainable

Ryno Crypto is committed to open-source principles and sustainability. Our solutions prioritize energy efficiency, heat recovery, and renewable energy integration, ensuring responsible mining practices.

AI-Native Operations

Our AI-powered autonomous management handles 95% of operational decisions, freeing your team to focus on strategic growth initiatives. This technology ensures maximum efficiency and profitability.

Q&A

Open Floor: Ask the Retrofit Team

Q&A Session

We invite you to ask any technical, financial, or logistical questions. Our team is here to provide transparency, open-source firmware access, and SLA guarantees. Ensure you leave with a clear understanding of the retrofit benefits.

Thank you.
